

CORROSION-RESISTANT. DEBRIS-FREE.

PIPE INTERIORS THAT SET THE STANDARD.

The latest revisions to the ASTM A53 and A795 fire sprinkler pipe standards have raised the bar for galvanization. Fortunately, Wheatland Tube's domestically manufactured pipe and sprinkler products have always exceeded these specifications.* Every galvanized pipe is rinsed and hot-dipped in-house. Every exterior is smoothed with high-pressure air knives. And every interior is blown out with steam to eliminate ash, dross and other contaminants.

This helps keep corrosion at bay while keeping you up to code.

When it comes to quality galvanized pipe, what's inside counts.
